

Addendum 03
RFP 2023-12 Tooling, Fixtures, Upgrades - Machining

The following question and answer provide clarification/correction for item 16 , Section 1.

Q. Please clarify if you need a 1/2" endmill or a 3/8" endmill. Using a 1/2" endmill and reducing the shank to 3/8" doesn't make sense, I'm assuming it was mis-typed. Please confirm.

HEPM 1/2" Carbide End Mill,, 3/8" Shank x 1" LOC, 0.03" Radius, 6 Flute, Hybrid AlCrN Coated, Chip Splitter

A. It should be 3/8" end mill with a 3/8" shank
